

You're Losing Profit. Your P&L Doesn't Show Where.

Averages and allocations mask where profit is gained and lost, making action slow and imprecise.

Your P&L reports total revenue, total cost, and total profit.

It doesn't show where profit is actually created or lost.

• Why Traditional Reporting Falls Short

01

Averages hide profitability

Mask true performance across customers, products, and channels.

02

Allocations distort cost-to-serve

Obscure the actual cost of serving customers, delivering products, and operating channels.

03

Profit drains erode margin

Unprofitable customers, products, and channels quietly reduce profit.

04

Profit peaks are underinvested

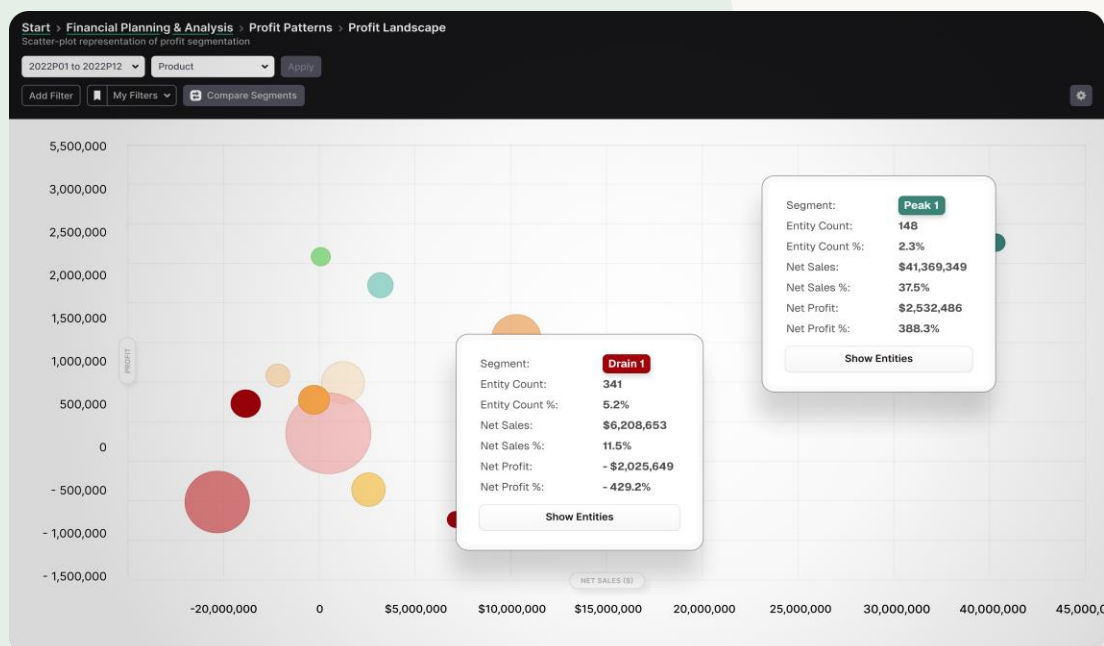

High-return customers, products, and channels are not fully recognized or scaled.

05

Conflicting data misaligns teams

Product, sales, marketing, and finance operate from inconsistent views of profitability, delaying action.

Profit Isle Profit OS reveals exactly where to act.

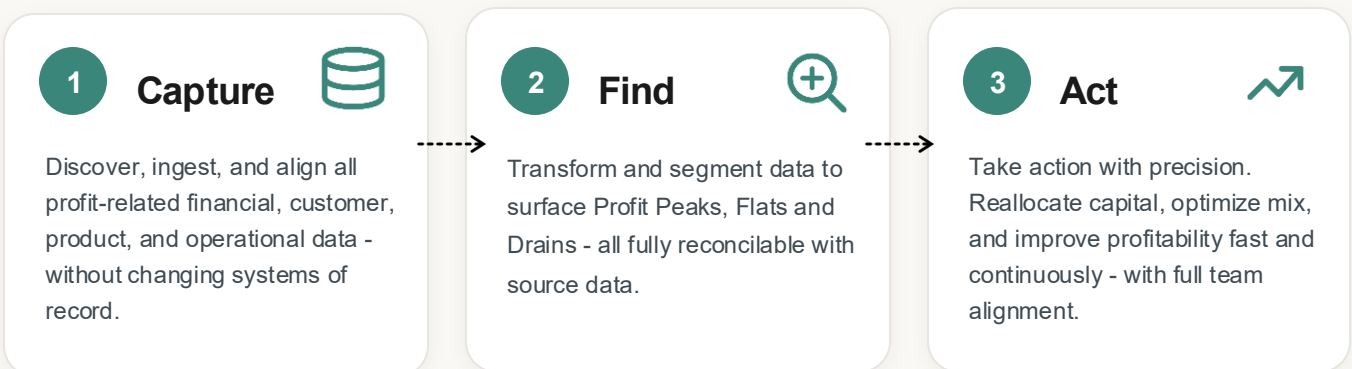

● Profit Peaks - high profitability ● Profit Flats - neutral ● Profit Drains - loss-making or low profitability

See and act on true net profit with **Profit Isle Profit OS** - and achieve a measurable improvement of 10%-30% to true net profit.

HOW IT WORKS

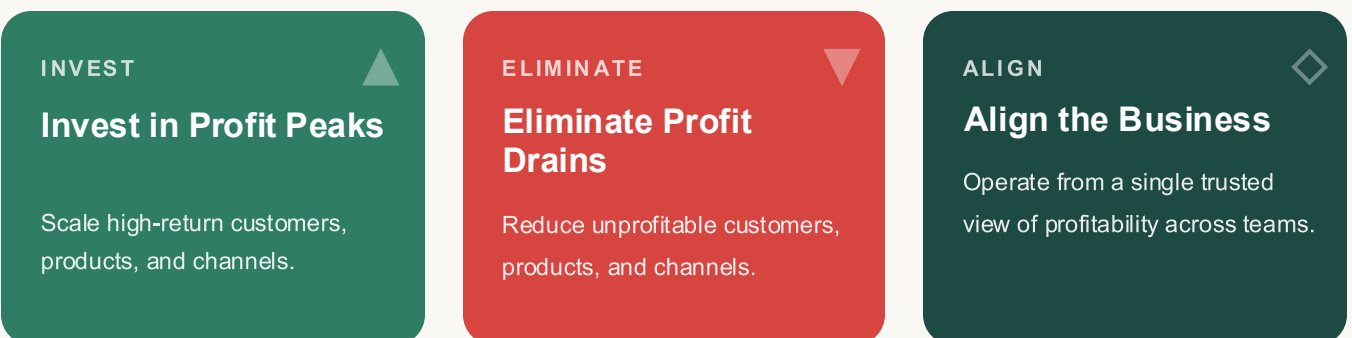

Profit OS Captures Profit Where It Happens

Profit Isle ProfitOS exposes and activates true net profit at the transaction level across all customers, products, and channels.

Profit OS Turns Profit Insight Into Action

Profit Isle ProfitOS enables fast, precise action on profit across customers, products, channels, and other key business dimensions.
